

Data Sharing - Research

Protecting Data Anywhere All The Time

Data security that helps you make the world a better place

Challenge

- Research collaboration necessitates making data available to outside parties while suppressing sensitive fields.
- Individuals collecting data require the ability to see the information they contributed without additional visibility.

Solution

- Sotero is used to de-identify and protect customer data, making it available to researchers.
- Role-based access controls allow for different data controls to be placed on different groups. This facilitates multiple groups having access with different visibility levels.

Benefits

- External parties are able to conduct statistical analysis on the entire data set without having any access to sensitive data.
- In-depth data modification tracking helps maintain compliance with the strictest regulatory standards, ensuring a fully attributable access trail.
- Multiple teams are able to simultaneously access and modify data in accordance with targeted group access roles.
- Sensitive data remains encrypted throughout its lifecycle, in transit, storage, and during use.

About Sotero

The Sotero Data Security Platform provides a centralized way to encrypt and protect data through its entire lifecycle – at rest, in transit, and in use. With real-time detection and automated quarantine of malicious access, Sotero also prevents active threats, giving you 360-degree data security without disrupting the user experience. With our lightning-fast encryption and our point and click set-up, Sotero's solution is easy to deploy and manage, ensuring you are protected in a matter of days, not weeks or months.
